

*T-cell activation*

## T-CELLS MIGHT BE OUR BODIES BEST SHOT AT STRENGTHENING THE IMMUNE SYSTEM.

There has never been as much attention as there is today about the importance of the immune system. Everywhere you turn, “immunity” is the focus and rightly so. Your immune system needs daily support to protect your body.

But now researchers are focusing on the ability of T cells, a group of immune cells that can target and destroy virus infected cells. T-cells are a very important part of the immune system and develop from stem cells in bone marrow. They are a big part in helping the body’s defensive system from being infected and may help to reduce the severity and longevity of infections.

### IMMUNO-CARE’S ROLE

Immuno-Care’s role is activating immune cells and regulating the immune response. Many supplements are known for boosting the immune system, which can over stimulate the system, but research shows that regulating or balancing the immune system as in the case of Immuno-Care, is a much better way to increase defensive immunity.

Immuno-Care gently encourages T-cell activation. Once the T-cells are mobilized their roles include directly killing infected host cells, activating other immune cells and producing signalling molecules that aid cell to cell communication in immune responses and stimulate the movement of other cells towards sites of inflammation, infection and trauma.

One of the remarkable hallmarks of our immune system is the ability to “remember” past exposure to infection. Immuno-Care encourages release of B-cells, the amazing memory cells that protect us from future encounters with the same pathogen.

Made in Canada in approved Health Canada facility.

## IMMUNO-CARE-ONE A DAY

Immuno-Care has been used clinically in many countries for 24 years to aid the immune system by “up-regulating” it when it is under-performing, such as when you might be sick, and “down-regulating” it when it is over-reacting, such as when you are suffering from allergies.

Other supplements contain plant sterols, but there is a key reason why Immuno-Care is simply better—the active sterols and antioxidants, and the other important nutrients are protected from the harsh conditions of the stomach by a proprietary enteric coating that allows the ingredients of each capsule to arrive intact in the small intestine. There the capsule can release its maximum potential and get to work regulating your immune system.

## GUARANTEED TO HELP FIGHT:

- Seasonal Allergies
- Fibromyalgia
- Eczema & Psoriasis
- Chronic Colds & Flu
- Painful Joints & Muscles
- Anti-inflammatory
- Helps athletes from getting colds and flu due to over exercising prior to an event
- Effective for reducing (LDL) bad cholesterol and increasing the good cholesterol (HDL).
- And other over-active immune conditions

**Immuno-Care consists of plant sterols, grapeseed antioxidants, Cellasate a combination of essential fatty acids, synergistically formulated for maximum immune support.**

## MAINTENANCE DOSE:

Generally, one capsule daily of Immuno-Care is a good maintenance dose. You can take up to 3 capsules daily if you have encountered an infection or have other immune related conditions. Upon rising, take one capsule of Immuno-Care on an empty stomach, wait 20 mins before eating a normal meal. Do not take Immuno-Care with dairy products for the first 20 minutes, then you can consume dairy if you wish. By doing this you will make Immuno-Care more active.

**SAFE**

For all dietary restrictions, including vegetarians, people on restricted diets such as starch free, preservative free and gluten-free.

**NOTE:** If you are on blood thinners, anti-biotics, or having surgery, pregnant or breast feeding, please consult with your physician. Organ transplant recipients must NOT take this product.
